NEX AI — WORKFORCE RESTRUCTURING & IMPACT EVAL REPORT

&–þ Workforce Imp

Confidential Workforce Alignment & Business Impact Review

EMPLOYEE NAME:	CCc	**EMPLOYEE ID:**	1
TARGET POSITION:	Data Analyst	**EVALUATION DATE:**	10/30/2026 06:51 PM

1. WORKFORCE ASSESSMENT SUMMARY & RETENTION PRIORITY

STATUS: REASSIGNMENT CANDIDATE

Restructuring Assessment Overview:
Employee CCc serves as a Data Analyst demonstrating solid technical proficiency in foundational Python and pandas data cleaning workflows. However, their assessment scope is narrowly restricted to coding multiple-choice questions without verifiable proof of broader benchmark skills such as SQL, Business Intelligence tools, or advanced statistical analysis.

Strategic Talent Action Recommendation:
Provide targeted upskilling and practical project assignments in SQL, business intelligence reporting, and exploratory data analysis to evaluate broader utility before committing to long-term retention or restructuring decisions.

2. ROLE & PROJECT CRITICALITY EVALUATION

Criticality: 5/10 (Moderate Value)

Operational Dependency Justification:
While data cleaning and preprocessing are vital baseline tasks within the data analytics pipeline, the current performance data is limited to isolated programmatic problem-solving rather than end-to-end dashboarding, stakeholder management, or production pipeline maintenance.

Coding MCQs Output Accuracy: 3/5 (60%)

3. BUSINESS VALUE DELIVERED & UNIQUE CONTRIBUTIONS

Impact Score: 5/10

Unique Organizational Contributions:

- Executing programmatic data cleaning and missing value imputation in Python
- Handling grouped transformations and basic aggregations using pandas

Business Impact Analysis:
The employee contributes to data hygiene and preliminary dataset preparation, ensuring downstream models or reports receive cleaned inputs, though direct measurable business revenue impact cannot be verified from the limited test transcript.

4. VERSATILITY, MULTI-SKILLING & ADAPTABILITY

Versatility: 4/10 (Limited)

Cross-Functional Capabilities & Secondary Skills:

- Python Scripting
- Data Preprocessing

Flexibility Under Resource Constraints:
Versatility is constrained by the absence of demonstrable multi-stack capabilities across database querying (SQL) or visualization platforms (Tableau/PowerBI), restricting their immediate adaptability across diverse data engineering or business intelligence functions.

5. REDUNDANCY RISK ANALYSIS

Redundancy Risk: Medium

Operational Sensitivity & Impact if Separated:

The operational risk of separation is moderate; while baseline data cleaning tasks can be readily automated or absorbed by adjacent data engineers and analysts, losing this role creates minor friction in preliminary dataset preparation.
