NEX AI — WORKFORCE RESTRUCTURING & IMPACT EVAL REPORT

&–þ Workforce Imp

Confidential Workforce Alignment & Business Impact Review

EMPLOYEE NAME:	Charan	**EMPLOYEE ID:**	EMP-101
TARGET POSITION:	Frontend Developer	**EVALUATION DATE:**	11/11/2026 02:39 PM

1. WORKFORCE ASSESSMENT SUMMARY & RETENTION

DECISION: KEEP ON HOLD (EVALUATE REASSIGNMENT)

Restructuring Assessment Overview:
Charan demonstrates strong practical application and initiative in frontend development, particularly in cache optimization and system design for the NEX AI project. However, his failure to pass basic technical coding assessments and the inclusion of a non-substantive response indicate a significant discrepancy between his self-reported experience and objective technical proficiency. Note: On 1 of 8 open-ended question(s), the respondent typed "Ok", which did not provide a technical answer to the prompt.

Strategic Talent Action Recommendation:
Perform a secondary technical audit to determine if the MCQ failure was an anomaly. If technical competency remains unverified, transition to a junior-supervised role with a mandatory performance improvement plan focused on fundamental language mastery.

2. ROLE & PROJECT CRITICALITY EVALUATION

Criticality: 5/10 (Moderate Value)

Operational Dependency Justification:
While Charan has been instrumental in implementing the pipelined caching architecture for NEX AI, his reliance on specific workflows suggests he is a specialist in a single feature set rather than a foundational system architect.

Coding MCQs Output Accuracy: 0/2 (0%)

INCORRECT	MCQ #1: Option C: ['ASYNC', 'CLASS', 'FUNCTION', 'CONST'] (Correct: Option A — ['ASYNC', 'FUNCTION'])
INCORRECT	MCQ #2: Option A: ['INTERFACE', 'TYPE', 'STRICT', 'READONLY', 'VERSION'] (Correct: Option B — ['INTERFACE', 'STRICT', 'READONLY',)

3. BUSINESS VALUE DELIVERED & UNIQUE CONTRIBUTIONS

Impact Score: 6/10

Unique Organizational Contributions:

- Implementation of background adaptive question-generation pipeline
- Optimization of frontend data-fetching latency via cache-first strategies

Business Impact Analysis:
Charan has directly improved user experience metrics by reducing latency in the NEX AI assessment interface through intelligent caching; however, his inability to demonstrate fundamental language proficiency creates a risk of technical debt.

4. VERSATILITY, MULTI-SKILLING & ADAPTABILITY

Versatility: 4/10 (Limited)

Cross-Functional Capabilities & Secondary Skills:

- Frontend Architecture
- Performance Optimization

Flexibility Under Resource Constraints:
Despite his claims of adaptability, his performance on technical screening questions and the provision of a 'rubbish' response to an open-ended prompt suggest a lack of depth in core programming concepts, limiting his ability to pivot to broader full-stack requirements.

5. REDUNDANCY RISK ANALYSIS

Redundancy Risk: Medium

Operational Sensitivity & Impact if Separated:

Separation would likely cause a short-term knowledge gap regarding the specific caching implementation of the NEX AI project, requiring transition time for existing staff to document and maintain the current workflow.
