NEX AI — CANDIDATE HIRING EVALUATION REPORT

Ø=Ü¼ Candidate H

Confidential Pre-Employment Competency & Technical Assessment

CANDIDATE NAME:	Sai Ram	**CANDIDATE / REF ID:**	CAND-101
TARGET POSITION:	Data Scientist	**EVALUATION DATE:**	11/7/2026 02:08 PM

1. EXECUTIVE CANDIDATE SUMMARY & HIRING RECOMMENDATION

DECISION: DO NOT HIRE

Candidate Overview & Evaluation:
The candidate demonstrates strong foundational knowledge in Python programming, data manipulation, and library-specific behavior, as evidenced by successful MCQ performance. However, they failed to provide any substantive or coherent technical justification regarding their stated AI/ML project experience, rendering their resume claims unsubstantiated.

Hiring Decision Rationale:
While the candidate passed the technical coding assessments, they were completely unable to articulate their claimed experience with RAG, LLMs, and machine learning architecture during the open-ended interview segments. This disconnect between resume claims and interview performance indicates a lack of genuine project ownership.

2. TECHNICAL SKILLS & ROLE BENCHMARK MATCH

Verified Candidate Competencies:

Python | Pandas | NumPy | Scikit-Learn | Data Structures

Target Competencies Needing Onboarding Focus:

Deep Learning Architecture | RAG Implementation | LLM Fine-tuning/Optimization | System Design

Technical Depth & Competency Analysis:
The candidate has a solid grasp of Python syntax, including closures, dictionary manipulation, and exception handling logic. However, there is a significant gap between their theoretical coding ability and their ability to explain complex machine learning systems or architectural trade-offs.

Coding MCQs Output Accuracy: 1/4 (25%)

3. RESUME VERIFICATION & REAL-WORLD PROBLEM SOLVING

Resume Credibility & Evidence Verification (Score: 2/10):

Python Programming proficiency | Academic background

Problem Solving Under Constraints:
The candidate's resume claims regarding AI/ML, RAG, and LLMs are not supported by their interview responses. The candidate consistently provided non-responsive, incoherent, or empty answers when prompted to describe specific technical implementations, suggesting that the listed projects may not be their own work.

4. TEAM COLLABORATION & CULTURAL SYNERGY

Score: 2/10 (Developing)

Collaboration Style & Teamwork Fit:
The candidate's inability to communicate technical project details effectively suggests significant deficits in professional communication and the ability to contribute meaningfully to technical discussions or cross-functional team brainstorming.

5. KEY CANDIDATE STRENGTHS & VALUE MULTIPLIERS

- Strong Python syntax knowledge
- Good understanding of Python scoping and exception handling
- High academic standing

Growth Areas for 90-Day Ramp:

- Technical communication
- Ability to articulate project architecture
- Professional depth in AI/ML application
